

The align-content property in CSS is used in a flex container with multiple lines of flex items (i.e., when the flex-wrap property is set to wrap or wrap-reverse). It defines how the lines of flex items are aligned in the cross axis.

```
.container
{
    display: flex;
    flex-wrap: wrap;
    align-content: flex-start;
}
```

Class	Properties
content-normal	align-content: normal;
content-center	align-content: center;
content-start	align-content: flex-start;
content-end	align-content: flex-end;
content-between	align-content: space-between;
content-around	align-content: space-around;
content-evenly	align-content: space-evenly;
content-baseline	align-content: baseline;
content-stretch	align-content: stretch;
