

The `grid-auto-rows` property in CSS Grid Layout is used to set the size of implicitly created rows in the grid. Implicit rows are those that are created automatically to accommodate grid items when their placement is not explicitly defined using `grid-template-rows`.

Class	Properties
<code>auto-rows-auto</code>	<code>grid-auto-rows: auto;</code>
<code>auto-rows-min</code>	<code>grid-auto-rows: min-content;</code>
<code>auto-rows-max</code>	<code>grid-auto-rows: max-content;</code>
<code>auto-rows-fr</code>	<code>grid-auto-rows: minmax(0, 1fr);</code>

Class	Properties
<code>auto-cols-auto</code>	<code>grid-auto-columns: auto;</code>
<code>auto-cols-min</code>	<code>grid-auto-columns: min-content;</code>
<code>auto-cols-max</code>	<code>grid-auto-columns: max-content;</code>
<code>auto-cols-fr</code>	<code>grid-auto-columns: minmax(0, 1fr);</code>

Class	Properties
<code>grid-flow-row</code>	<code>grid-auto-flow: row;</code>
<code>grid-flow-col</code>	<code>grid-auto-flow: column;</code>
<code>grid-flow-dense</code>	<code>grid-auto-flow: dense;</code>
<code>grid-flow-row-dense</code>	<code>grid-auto-flow: row dense;</code>
<code>grid-flow-col-dense</code>	<code>grid-auto-flow: column dense;</code>
