The z-index property in CSS is used to control the stacking order of positioned elements. It determines the order in which elements are stacked on the z-axis (front to back) relative to one another.

Here's how the z-index property works:

Elements with a higher z-index value are stacked above elements with a lower z-index value.

If two elements have the same z-index, the one that comes later in the HTML source order will be stacked on top.

Tailwind CSS

Class	Properties
z-0	z-index: 0;
z-10	z-index: 10;
z-20	z-index: 20;
z-30	z-index: 30;
z-40	z-index: 40;
z-50	z-index: 50;
z-auto	z-index: auto;
